QUICK START GUIDE

EN-XGSFPP-OMAC-V2

Accessing the Web GUI :

Make sure the control interface and the SFP+ Stick are under the same VLAN.

The default IP of the stick is <mark>192.168.11.1</mark>, so the control computer IP should be set to 192.168.11.xxx.

The stick and the control computer IP should be under the same network For example: You can set the computer IP to 192.168.11.5
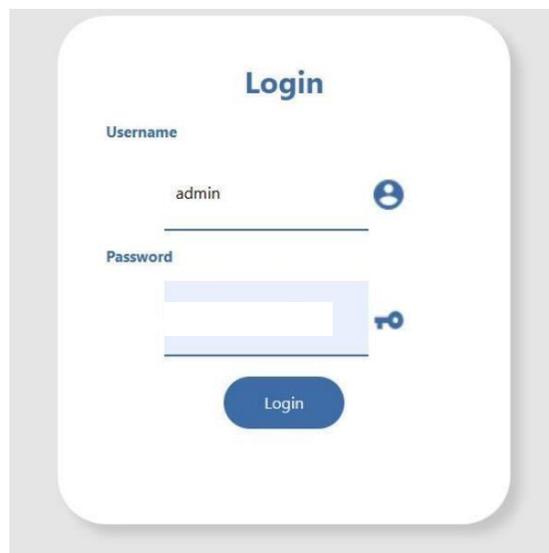

Check whether the network is connected : ping 192.168 .11.1 -t

1) Web GUI :

Enter the stick's IP into your web browser : 192.168.11.1
Username: <mark>admin</mark>
Password: <mark>QsCg@7249#5281</mark>

2) Enabling Telnet and SSH :

Select the **Service** tab > Enable Telnet/SSH and save.

3) Entering Test Mode (Telnet) :

Input the following username and password :
Username (Telnet): root
Password (Telnet): QpZm@4246#5753

- Telnet login to the gateway
- Send the command "**load_cli factory**"
- You are now in test mode

If successful, the command will return "**config/factorydir #**"
